33. (original) A method for regeneration of a plant from a plant cell or plant tissue which comprises the steps of:
- (a) contacting said plant cell or plant tissue with an amount of an auxinic compound effective for regeneration of roots and
 - (b) contacting said plant cell or plant tissue with a combination of said auxinic compound and a cytokinin in a combined amount effective for the regeneration of shoots from said plant cell or plant tissue wherein said auxinic compound has the formula:

or salts, esters and amides thereof, wherein R_1 - R_5 are independently selected from the group consisting of a hydrogen, a halogen, an alkyl-group, an alkoxy-group, an acyl-group, an acyloxy-group, and an acylamido-group, but excluding indole-3-acetic acid and 5-bromoindole-3-acetic acid.
